

Remote patient monitoring for your nephrology practice

Renal@Home is the leading remote patient monitoring (RPM) platform for nephrology practices. Our product enables providers to remotely manage their patient's renal condition while supporting patient outreach, device setup, and personalized reminders for optimal outcomes.

How It Works

- 01** Provide preventative renal care using our remote patient monitoring device and connected software system.
- 02** Follow your patient's progress easily throughout the month.
- 03** Receive monthly payment from the relevant insurance codes resulting in increased revenue for your practice.

Renal@Home enables nephrology clinics to provide remote patient monitoring services to their patients to manage hypertension while earning additional revenues.

Our Services

Drive Better Patient Outcomes

With actionable data to help identify and treat at-risk patients faster, for better outcomes.

Increase Patient Adherence

Using automated personalized text message reminders, saving time for physicians and medical staff.

Improve Health Metrics

Experience measurable improvements to patient health, including hypertension and other metrics.

Onboard Patients Seamlessly

Enable easy patient onboarding, enrollment and device setup and training so your practice can be up and running quickly and efficiently.
